Computational Fluid Dynamics in Food Processing (Contemporary Food Engineering)

Computational Fluid Dynamics in Food Processing (Contemporary Food Engineering)

The implementation of early-stage simulation tools, specifically computational fluid dynamics (CFD), is an international and interdisciplinary trend that allows engineers to computer-test concepts all the way through the development of a process or system. With the enhancement of computing power and efficiency, and the availability of affordable CFD packages, the applications of CFD have extended into the food industry for modeling industrial processes, performing comprehensive analyses, and optimizing the efficiency and cost effectiveness of the new processes and systems.

Beginning a new series dedicated to contemporary, up-to-date food engineering practices, **Computational Fluid Dynamics in Food Processing** is the first book of its kind to illustrate the use of CFD for solving heat and mass transfer problems in the food industry. Using a computational grid, CFD solves governing equations that describe fluid flow across each grid cell by means of an iterative procedure in order to predict and visualize the profiles of velocity, temperature, pressure, and other parameters. Starting with an overview of CFD technology and applications, the book illustrates the use of CFD for gaining a qualitative and quantitative assessment of the performance of processes involving heat and mass transfer. Specific chapters cover airflow in refrigerated trucks, retail display cabinets, microwaves, and doorways; velocity in meat dryers and spray drying; thermal sterilization; plate heat exchangers; membrane separation systems; jet impingement ovens; food extrusion and high-pressure processing; prediction of hygiene; design of biosensors; and the fermentation of tea and ripening of cheese.

Drawing from an esteemed panel of international professionals and academics, this groundbreaking book provides engineers and technologists in research, development, and operations with critical, comprehensive, and readily accessible information on the art and science of CFD technology.

From reader reviews:

Anthony Pippin:

This Computational Fluid Dynamics in Food Processing (Contemporary Food Engineering) are usually reliable for you who want to be described as a successful person, why. The reason of this Computational Fluid Dynamics in Food Processing (Contemporary Food Engineering) can be one of the great books you must have is definitely giving you more than just simple looking at food but feed an individual with information that possibly will shock your earlier knowledge. This book is handy, you can bring it almost everywhere and whenever your conditions both in e-book and printed kinds. Beside that this Computational Fluid Dynamics in Food Processing (Contemporary Food Engineering) giving you an enormous of experience like rich vocabulary, giving you trial of critical thinking that we realize it useful in your day action. So , let's have it and luxuriate in reading.

Thomas Tritt:

Computational Fluid Dynamics in Food Processing (Contemporary Food Engineering) can be one of your beginning books that are good idea. We all recommend that straight away because this guide has good vocabulary that may increase your knowledge in language, easy to understand, bit entertaining but delivering the information. The article writer giving his/her effort to put every word into enjoyment arrangement in writing Computational Fluid Dynamics in Food Processing (Contemporary Food Engineering) yet doesn't forget the main place, giving the reader the hottest in addition to based confirm resource facts that maybe you can be one of it. This great information can certainly drawn you into fresh stage of crucial pondering.

Mario Rice:

Are you kind of occupied person, only have 10 or 15 minute in your moment to upgrading your mind expertise or thinking skill actually analytical thinking? Then you have problem with the book in comparison with can satisfy your small amount of time to read it because this time you only find publication that need more time to be read. Computational Fluid Dynamics in Food Processing (Contemporary Food Engineering) can be your answer since it can be read by you who have those short spare time problems.

Jose Hackler:

Is it an individual who having spare time and then spend it whole day through watching television programs or just laying on the bed? Do you need something new? This Computational Fluid Dynamics in Food Processing (Contemporary Food Engineering) can be the answer, oh how comes? The new book you know. You are thus out of date, spending your time by reading in this new era is common not a geek activity. So what these publications have than the others?
