## **Coming of Age in the Milky Way** Timothy Ferris

The history of astronomy and astrophysics. It is also the history of the universe as we know it up to this point in time. What is obvious throughout the book, is that the more man learns the more he knows about the universe and all its creations including himself is how much he really doesn't know. As twentieth physician Lew Thomas put it, "The greatest of all the accomplishments of twentieth-century science has been the discovery of human ignorance." Ferris takes the reader first through early man's reaction to the skies and the stars. Someone even as brilliant and learned as Aristotle thought there were two realms of the skies. His hypothesis was that there was a realm below the moon and one above it and that there was no great beyond because virtually nothing existed beyond it. To Aristotle, the stars were stationary objects in the upper realm.
