## **The Glass Bead Game: Mercury and Hazel Pt. 2** Paul Pilkington

In 1943, Hermann Hesse published his novel *Das Glasperlenspiel* (The Glass Bead Game). The game itself is a central theme of the novel. He gave only a sketch of how it might be played in practice, but made it clear that it is a game of comparisons and analogies across different subject areas, in the tradition of Pythagoras, Lull, Kepler, Kircher and others who searched for the unifying principles of all knowledge. The history of the development of the game in the novel demonstrates a direct analogy with the history of mathematics in the seventeenth century, as shaped by mathematicians with a deep interest in music theory. Paul Pilkington has brought the Glass Bead Game to life in an ongoing series of books. His version of the Glass Bead Game can be played at many levels of complexity. Its moves can be deeply technical, or conversationally playful. A move in a game about music and astronomy might ask: If the solar year in astronomy is like the octave in music, what is the equivalent of a lunar month in music? A more playful game about music and fashion asks: If Alexander McQueen is the Jimi Hendrix of fashion, what is his Purple Haze? Another asks: Who is the Napoleon of football, and what was his Waterloo? A more intimate game enquires: Where is your Ithaca? This second volume presents a game involving gods, metals, planets and trees (particularly mercury and hazel), considers the evolution of naming and classification systems in each subject area, and the possibility of a root and centre of all knowledge. There are two other volumes currently available, and a forthcoming volume will collect notable examples of glass bead game moves from literature, the media, and other diverse sources, and will put into play a range of opening gambits intended to inspire further exploration and elaboration of the form by others, especially in more informal contexts. Paul is sharing the ongoing work at his Twitter account @JustKnecht. Playfully using the language of the game itself: in bringing the concept of the dreamer into reality, these volumes do for *Glasperlenspiel* what Gothic architecture did for the light-drenched *Enneads* of Plotinus, what the Bolshevik revolution did for *Capital* by Marx, and what the World Wide Web did for *Neuromancer* by Gibson.
